DESCRIPTORS: Therapy, *Hypertension, *Pregnancy,
Drugs, *Guanethidine, Diuretics.

In the treatment of toxemia of pregnancy hypotensive
therapy although it does not represent causal therapy
plays a role of particular importance. Aside from
counteracting the hypertension it also overcomes the
vascular constriction and improves cardiac dynamics.

DESCRIPTORS: *Diuretics, Drugs, Therapy, Potassium,
Excretion, Urine, *Chlorothiazide diuretics, Vasoactive
agents, Sympatolytic agents.

Experiments on the diuretic action of cyclopenthlazide
prove clearly that the therapeutic action of the drug is
undoubtedly different from that of hydrochlorothiazide in
a positive sense. Its activity can be compared with
that of the most recent thiazide derivatives; its truly
slight influence on potassium excretion seems even to
be less than that exerted by these latter preparations.
